## Scenario

A 'Bank' requires a database to store its information conveniently in order to have access to a certain account holder's details when needed while doing transaction across the other accounts of customers. A certain bank has a chain of branches throughout the cities. The customers registered under a branch of a certain bank can be uniquely identified using the **NIC** number of the customer. One customer can have either one or more accounts in a bank. Also, an account can be uniquely identified by its **account number**. Bank loans may exist under some customers or maybe several debts under one customer, also several customers may exist under one loan facility. Each and every account and loan facility has a specific branch mentioned. A customer is given a pin number to verify before getting access to one's holdings to do a transaction in a account.

The following are the attributes of the entities of the above scenario.

### Bank

(unique) name, (unique)number, E-mail, Address,  
telephone number

### Customer

Name, (unique)Id, DOB, Gender, Occupation, Salary, Pin, telephone number

### Account

Account type, Balance, Interest rate

### Loan

Loan type, Amount, Loan account number

### Branch

E-mail, branch number, telephone number, city

**State any assumptions relevant to the scenario in order to proceed with the ER diagram.**

### Assumption

1. Each bank has many branches but each branch have one bank.
2. Each customer can register many branch, each branch have many customers.
3. Each account in one branch, each branch have many accounts.
4. There can not be any account without customer.
5. There cannot be any customer without account.
6. There cannot be any customer without branch.
7. There can be branch without customer.
8. There can not be branch without bank.
9. There can be bank without branch.

Bank

# NORMALIZATION

## 0 NF

Customer Table

| NIC          | Name              | Sex | D.O.B.     | Tel_No.                  | Pin  | Occupation        | Salary    | A/C_No.    |
|--------------|-------------------|-----|------------|--------------------------|------|-------------------|-----------|------------|
| 199620005V   | Isuru Jayasinghe  | M   | 1986/03/21 | 0718661001               | 1126 | Civil_Engineer    | 400,000/= | 5684211839 |
| 199628890V   | Shashini Perera   | F   | 1996/08/30 | 0777012231<br>0776811248 | 2284 | Event_Manager     | 500,000/= | 6680230091 |
| 200150001189 | Devin Weerasekara | M   | 2001/07/01 | 0726450811               | 3869 | Software_Engineer | 600,000/= | 8744426990 |

- Since the above customer table is in the 0<sup>th</sup> Normalization form, in order to convert it to the 1<sup>st</sup> Normalization form all the **‘Multi- valued attributes’, ‘Composite attributes’ and the ‘Nested relations are being removed.**

## 1st NF

Customer Table

| <u>NIC</u>   | <u>First_Name</u> | <u>Surname</u> | <u>Sex</u> | <u>D.O.B.</u> | <u>Tel_No.</u> | <u>Pin</u> | <u>Occupation</u> | <u>Salary</u> | <u>A/C_No.</u> |
|--------------|-------------------|----------------|------------|---------------|----------------|------------|-------------------|---------------|----------------|
| 199620005V   | Isuru             | Jayasinghe     | M          | 1986/03/21    | 0718661001     | 1126       | Civil_Engineer    | 400,000/=     | 5684211839     |
| 199628890V   | Shashini          | Perera         | F          | 1996/08/30    | 0777012231     | 2284       | Event_Manager     | 500,000/=     | 6680230091     |
| 200150001189 | Devin             | Weerasekara    | M          | 2001/07/01    | 0726450811     | 3869       | Software_Engineer | 600,000/=     | 8744426990     |

Extra information account table

| <u>NIC</u> | <u>First_Name</u> | <u>Surname</u> | <u>Sex</u> | <u>D.O.B.</u> | <u>Tel_No.</u> | <u>Pin</u> | <u>Occupation</u> | <u>Salary</u> | <u>A/C_No.</u> |
|------------|-------------------|----------------|------------|---------------|----------------|------------|-------------------|---------------|----------------|
|------------|-------------------|----------------|------------|---------------|----------------|------------|-------------------|---------------|----------------|

|            |          |        |   |            |            |      |                   |           |            |
|------------|----------|--------|---|------------|------------|------|-------------------|-----------|------------|
| 199628890V | Shashini | Perera | F | 1996/08/30 | 0776811248 | 2284 | Event_<br>Manager | 500,000/= | 6680230091 |
|------------|----------|--------|---|------------|------------|------|-------------------|-----------|------------|

- The above table is in 1NF where all the multi valued attributes, composite attributes are being removed.
- To convert it to the 2NF the '**Partial dependencies**' must be eradicated from the above table.
- Where the partial dependency means when only one key/one prime attribute (primary key) determines **one or more** '**non-prime**' attributes in the table, while full functional dependency means when primary key and the foreign key (All the '**prime**' attributes) determines the all the non-prime attributes.

## 2 NF -----> Partial dependency

### Customer Reference

| <u>NIC</u>   | Occupation            | First_Name | Surname     | Tel_No.    | Salary    | Sex | D.O.B.     |
|--------------|-----------------------|------------|-------------|------------|-----------|-----|------------|
| 199620005V   | Civil_Engineer        | Isuru      | Jayasinghe  | 0718661001 | 400,000/= | M   | 1986/03/21 |
| 199628890V   | Event_<br>Manager     | Shashini   | Perera      | 0777012231 | 500,000/= | F   | 1996/08/30 |
| 200150001189 | Software_<br>Engineer | Devin      | Weerasekara | 0726450811 | 600,000/= | M   | 2001/07/01 |

### Extra information account table

| <u>NIC</u> | <u>Tel No.</u> |
|------------|----------------|
| 199628890V | 0776811248     |

## 2 NF ----> Full Functional Dependency

### Account for Customer

| <u>NIC</u> | Pin  | Occupation         | Salary    | <u>A/C No.</u> |
|------------|------|--------------------|-----------|----------------|
| 199620005V | 1126 | Civil_<br>Engineer | 400,000/= | 5684211839     |

|              |      |                       |           |            |
|--------------|------|-----------------------|-----------|------------|
| 199628890V   | 2284 | Event_<br>Manager     | 500,000/= | 6680230091 |
| 200150001189 | 3869 | Software_<br>Engineer | 600,000/= | 8744426990 |

- Since the partial dependencies are clearly identified separately the above tables are in 2NF.

### 3 NF -----> Transitive Dependency

#### Salary account

| <u>Pin</u> | Salary    |
|------------|-----------|
| 1126       | 400,000/= |
| 2284       | 500,000/= |
| 3869       | 600,000/= |

#### Customer table

| <u>NIC</u>   | Occupation            | First_Name | Surname     | Sex | D.O.B.     | Tel_No.    |
|--------------|-----------------------|------------|-------------|-----|------------|------------|
| 199620005V   | Civil_Engineer        | Isuru      | Jayasinghe  | M   | 1986/03/21 | 0718661001 |
| 199628890V   | Event_<br>Manager     | Shashini   | Perera      | F   | 1996/08/30 | 0776811248 |
| 200150001189 | Software_<br>Engineer | Devin      | Weerasekara | M   | 2001/07/01 | 0726450811 |

Extra information of customer table

| <u>NIC</u> | <u>Tel No.</u> |
|------------|----------------|
| 199628890V | 0776811248     |

- When it comes to the 3NF all the transitive dependencies should be removed. Which means all the non-prime attributes determining other non-prime should be removed.

Note: Tables which are in 3NF is in 1NF and 2NF as well.
